

## How do I create a vid thumbnail?

Last Modified on 10/17/2023 12:47 pm EDT

A thumbnail is the image that displays on vids until the vid is hovered over or clicked on.

### How do I create a thumbnail for my vid?

Click on <Launch> once your vid has fully uploaded and processed, and then click <Edit Thumbnail>. A drop-down menu will appear with two options for creating your thumbnail. You can choose to select a thumbnail directly from your vid or upload your own thumbnail. See the screenshot below:

### Creating a teaser using the 'Select from vid' option

This option lets you use a still from your vid as the thumbnail. First, the vid needs to be played and paused at the desired frame. Next, click <Select from vid> once you've found the right frame to apply your thumbnail.

### Creating a teaser using the 'Upload' option

When selecting this option, it allows you to use a custom image as your thumbnail. To add your custom image click <Upload> from the drop-down and the option to select the image file will appear. After selecting the desired image, a preview window will open which will require you to select the area you wish to be displayed (if the image is too large, you may need to crop it).

**Save your changes!** After you have created your thumbnail using one of the two methods and you've added all the other details to your vid, click <Save> at the bottom of the page!

*Tip! We suggest selecting an exciting thumbnail that will entice your fans to purchase your vid.*
